and Consultancy

About this course:

"Process Safety Management is a blend of engineering and management skills. It focuses on the prevention of catastrophic accidents and near misses associated with loss of containment of energy or dangerous substances such as chemicals and hydrocarbons." – from NEBOSH –

This NEBOSH course is delivered in association with NEBOSH accredited provider International HSE Council.

Intended for:

This qualification is designed for managers, supervisors, and safety professionals to provide them adequate process safety knowledge and to allow them to manage their process safety responsibilities in their respective departments.

Course content:

The course is divided into 4 elements:

- Element 1 : Process safety leadership
- Element 2 : Management of process risk
- Element 3 : Process safety hazard control
- Element 4 : Fire and explosion protection

Certification and assessment:

This course is assessed through a 1.5-hour multiple-choice exam and candidates who pass the assessment will receive a qualification parchment from NEBOSH.
